Drawdown Management App

User Access Permissions

Account: **OPJQICB-DEV** (Adamas) · App: `CYGNET_TRANSFORMATION.APP.DRAWDOWN_MANAGEMENT_DAILY` · Updated: 2026-10-06

The app runs with **owner's rights**: every query and comment write executes as the app's owning role, `CYGNET_ADMIN`. Users therefore need **no access to the underlying data** — only the three grants below on the role they use.

Permissions required for a user's role

#	Privilege	Object	Object type	Why it is needed
1	USAGE	`CYGNET_TRANSFORMATION`	Database	Resolve the app's database
2	USAGE	`CYGNET_TRANSFORMATION.APP`	Schema	Resolve the app's schema
3	USAGE	`CYGNET_TRANSFORMATION.APP.DRAWDOWN_MANAGEMENT_DAILY`	Application service	Open the app URL and use all features: view wells and charts; add, edit and delete comments and annotations

Grant script (replace `<ROLE>` and `<USER>`):

```
GRANT USAGE ON DATABASE CYGNET_TRANSFORMATION TO ROLE <ROLE>;
GRANT USAGE ON SCHEMA CYGNET_TRANSFORMATION.APP TO ROLE <ROLE>;
GRANT USAGE ON APPLICATION SERVICE CYGNET_TRANSFORMATION.APP.DRAWDOWN_MANAGEMENT_DAILY TO ROLE <ROLE>;
GRANT ROLE <ROLE> TO USER <USER>;   -- if the user does not already have the role
```

Not required for users

Item	Reason
Warehouse USAGE	Queries run on the app's warehouse (`REPORTING_WH`) as `CYGNET_ADMIN`
SELECT on views, tables or functions	Data is read by `CYGNET_ADMIN`, not the user
INSERT / UPDATE / DELETE on `ASSET_COMMENTARY`	Comment writes run as `CYGNET_ADMIN`; the signed-in user is recorded as the author
Access to the `EDW` database	Read by `CYGNET_ADMIN` through `VW_DRAWDOWN_WELL_MASTER`

Current role access (as of 2026-10-06)

Role	App USAGE	Database USAGE	Schema USAGE	Can open the app
`CYGNET_ADMIN`	Owner	Yes	Yes	Yes
`EDW_OPERATIONS_RO`	Yes	Yes	Yes	Yes
`EDW_PLANNING_RO`	Yes	Not granted directly	Not granted directly	Only if inherited from another role — otherwise apply grants #1 and #2

Notes

- Any user who can open the app sees all wells and can add, edit or delete any comment. Access is controlled only by who holds the three grants above.
- Users who can't reach the app usually have the role without grants #1–#2, or are signed in with a different default role.
- Optional operations roles: **OPERATE** on the service (suspend / resume / upgrade) and **MONITOR** (status and logs). Redeploys must use `CYGNET_ADMIN`, the owning role.
